

Tolerance for performance data

Acceptable deviations from performance data (tolerances) do not constitute a defect, in particular as regards the following tolerances:

- Flow from breathing air compressors: measured in refill bottles from 0 to 200 bar, $\pm 5\%$
- Flow from industrial air and gas compressors: measured in accordance with VDMA 4362 with flow meter at 80% of final pressure $\pm 5\%$
- Absorbed power: KW $\pm 5\%$
- Compressor speed: 1/min $\pm 5\%$
- Working pressure (final pressure): bar $\pm 5\%$
- Safety valve test pressure: bar $\pm 5\%$
- Operating voltage: Volt $\pm 10\%$, frequency Hz $\pm 1\%$
- Noise in decibels at a distance of 1 m: ± 2 db
- Net weight: kg $\pm 5\%$
- Size: m $\pm 5\%$
